

You are a senior full stack and SEO developer working on an existing website, and your task is to create a complete blog section that is fully integrated into the site. Build a dedicated "Blog" index page that lists every blog post with title, short excerpt, publish date, and a featured hero image, then add a visible text link to this Blog page in the global footer navigation of the site. For each blog, generate fully SEO optimized content including a unique SEO title tag, meta description, URL slug, and on-page structure using Title, H1, H2, H3, H4, H5, H6 tags plus internal links, applying semantic SEO and GEO targeting focused. For every post, also generate a hero image prompt based on the exact blog title that could be used with an AI image generator and include alt text that is descriptive, location aware, and keyword rich. Create one complete blog post (with all SEO fields, heading structure, and hero image prompt) for each of the following titles:
